Investment Management and Portfolio Management

Investment Management and Portfolio Management (Portfolio Management) Overview

Investment management involves the selection, monitoring, and rebalancing of investments to achieve specific financial goals. Portfolio management is a subset of investment management, focusing on the construction and management of a portfolio of assets. The primary goal of portfolio management is to maximize returns while minimizing risk. This is achieved through diversification, asset allocation, and risk management.

Key Concepts in Portfolio Management

- Aggressive Portfolio:** This portfolio is designed to achieve high returns, typically by investing in high-risk, high-growth assets such as technology stocks and emerging markets. It is suitable for investors with a high risk tolerance and a long investment horizon.
- Defensive Portfolio:** This portfolio is designed to preserve capital and provide steady, low-risk returns. It typically includes assets such as government bonds, blue-chip stocks, and dividend-paying stocks. It is suitable for investors with a low risk tolerance and a short investment horizon.
- Balanced Portfolio:** This portfolio aims to provide a moderate level of risk and return, typically by investing in a mix of stocks and bonds. It is suitable for investors seeking a balanced approach to investment.

Portfolio Diversification (Portfolio Diversification)

Portfolio diversification is the process of spreading investments across different assets, sectors, and geographies to reduce risk. The principle of diversification is based on the idea that the returns of different assets are not perfectly correlated, meaning that the performance of one asset does not always move in tandem with the performance of another. By diversifying, investors can reduce the overall risk of their portfolio while maintaining a target level of return.

- Asset Allocation: The process of dividing investments among different asset classes (e.g., stocks, bonds, real estate) based on the investor's risk tolerance and investment goals.
- Sector Allocation: The process of dividing investments among different sectors (e.g., technology, healthcare, consumer goods) to reduce the risk of overexposure to a single sector.
- Geographic Allocation: The process of dividing investments among different countries or regions to reduce the risk of overexposure to a single country or region.
